Complex, ageing hybrid estate

Ageing infrastructure
End of support

Rising costs
Low utilisation

Security & compliance risk

Fragmented platforms
Siloed operations

Limited visibility
Uncertain decisions

Evidence-led decision pathway

Turning insight into confident action

01 Understand

Discover workloads, dependencies, utilisation, costs, risks and constraints across your estate.

02 Prioritise

Align decisions to what matters most: cost, resilience, performance, security, governance and operational simplicity.

03 Evaluate

Compare credible options across existing platforms, private cloud, VM Essentials, GreenLake, colocation and managed operations.

04 Decide

Workload-by-workload outcomes: retain, optimise, re-platform, modernise, move or retire.

05 Plan

Build a phased roadmap with optimisation, coexistence and controlled delivery to reduce risk and protect investment.

06 Deliver & optimise

Implement with confidence, optimise continuously and evolve as your business demands change.

Balanced modern hybrid environment

Flexible, secure and optimised for every workload

Private cloud
Secure, governed private cloud to run critical workloads with full control.

Public cloud
Use public cloud strategically for elasticity, innovation and scale.

Colocation
High performance infrastructure with resilient connectivity and enterprise control.

Virtualisation
Modern, flexible virtualisation with greater choice and efficiency.

Operating model across every platform

Managed operations
Proactive monitoring, management and support to maximise availability, security and performance.

Built on a strong foundation

- Stronger security & compliance
- Cost control & efficiency
- Resilience & continuity
- Data sovereignty & control
- Flexibility & future choice
