

Deliver cost-effective healthcare with smart buildings

Improve security and reduce costs with Cisco

Healthcare providers' have three primary challenges—cost, security and clinical productivity. But they can't be healed with just a plaster.

Smart buildings are the cure

Reduce costs

Investing in smart building technology might initially seem unwise given the lack of funding available to the NHS. However, such an investment can reduce overall costs.

- Through intelligent energy management and system automation, smart buildings lower operational costs and maintenance expenses.
- Optimising resource usage reduces energy consumption and costs.
- Predictive maintenance through real-time monitoring of the condition of systems and equipment – minimises maintenance costs.

Improve security

Smart building technology uses advanced security systems to create a safe and secure environment for occupants, protect valuable assets and ensure the integrity of infrastructure.

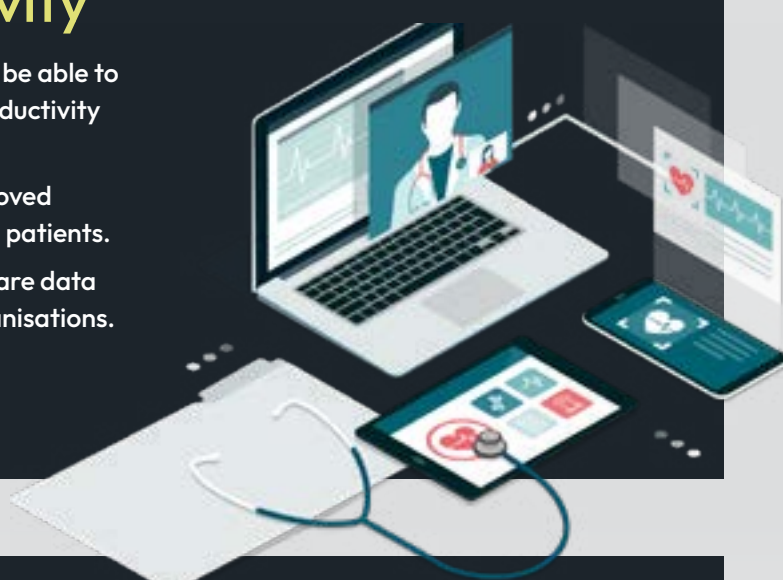

- Access control systems ensure authorised access, integrating with smart building platforms for centralised management.
- Strategically placed surveillance cameras enable remote monitoring, real-time video analytics and timely response to detect suspicious activities.
- Integrated systems such as panic alarms, intercoms and mass notification systems, allow for prompt detection and automated responses.

Increase clinical productivity

With the insights generated by smart technology, you'll be able to make more strategic decisions and increase clinical productivity thanks to efficient and effective technologies.

- Strong connectivity, enabling faster speeds and improved performance ensuring reliable coverage for staff and patients.
- Interconnected IoT devices that communicate and share data across your organisation and with other partner organisations.
- Data analytics help optimise building operations and reduce downtime.

Improve your buildings with Wavenet and Cisco

Overcome these challenges by implementing smart building technology. Enhance your ability to deliver efficient, safe and cost-effective healthcare, improving clinical productivity and building resilience for the future.

Get immediate access to:

Integrated systems and tools to help you promptly detect and respond to threats

A unified IT network infrastructure, powered by AI and machine learning

Real-time data enabling optimised building performance, enhanced occupant comfort and increased energy efficiency

Cost savings through intelligent energy management and system automation

Reimagine your healthcare provision

Transform your facilities into smart buildings by:

Wavenet, a Cisco partner

Certification: Wavenet is a Cisco Gold Certified Partner, providing Cisco solutions with advanced specialisations, including Advanced Security and Advanced Networking.

- Expertise and experience: Our skilled team of accredited engineers has a long history of delivering connectivity solutions to the healthcare sector.
- Specialist partners: Our solutions are supported by a network of eco-partners to deliver top-class solutions.
- End-to-end expertise: From data centre to device across cloud, networking and connectivity, unified communications and business continuity.
