Executive Summary

5 benefits of a network intelligence solution

Do you know what's happening in your network? Or are you flying blind?

Without full visibility, you're at serious risk. Downtime costs over £7,000 per minute, and without clear insight, you can't prevent problems before they escalate.

Security is another issue. If your company falls under the NIS2 directive, network intelligence isn't optional—it's essential.

Here's why investing in network intelligence solutions is a no-brainer:

1. Rock-solid security

The NIS2 directive enforces strict security rules for essential and important service providers in the EU—regardless of location. Non-compliance means hefty fines.

Wavenet's network intelligence portfolio of solutions gives you total visibility so that you can spot threats, block attacks and stay compliant.

2. Smarter traffic management

Stronger security means fewer attacks. Fewer attacks mean less downtime.

But cyber threats aren't the only issue. Without visibility, you can't fix bottlenecks or optimise traffic flow.

Wavenet's network intelligence solutions clarify application paths and network interdependencies, ensuring smooth performance across on-premises, cloud, or hybrid environments.

3. Cut downtime, stay online

Between 2020-2023, nearly two-thirds of businesses suffered at least one major outage, averaging four hours each—costing £2.16 million per incident.

Our network intelligence tools help you hit 99.999% uptime, where only planned maintenance interrupts operations. Downtime kills productivity, damages reputations, and invites legal trouble. Why risk it?

4. Slash costs, boost efficiency

Beyond preventing unplanned costs, investing in network intelligence improves IT budget management.

Modern solutions streamline operations, reduce legacy system costs, and simplify cloud adoption. Lower support expenses, optimise cloud services, and eliminate wasteful spending.

More visibility = fewer surprises = lower costs.

5. Smarter automation, less hassle

Networks are complex and constantly evolving. Automation keeps you ahead.

Intent-based automation detects and resolves issues fast, sending alerts before incidents escalate. Continuous audits ensure compliance with regulations like NIS2—without the manual workload.

The bottom line: stronger business, happier customers

A secure, optimised, and smooth-running network benefits everyone. No security breaches. No downtime. Just seamless performance.

Happy customers stay loyal. And a well-run business? That's built for long-term success. And that's what you can achieve with Wavenet's network intelligence solutions.
