Managed Print

Making printers an asset for modern businesses.

A decade ago, printers were solely used to produce physical copies of documents. While that need still exists, today's hybrid work environments demand printers with advanced capabilities to serve as business-enabling hubs for both print and digital workflows.
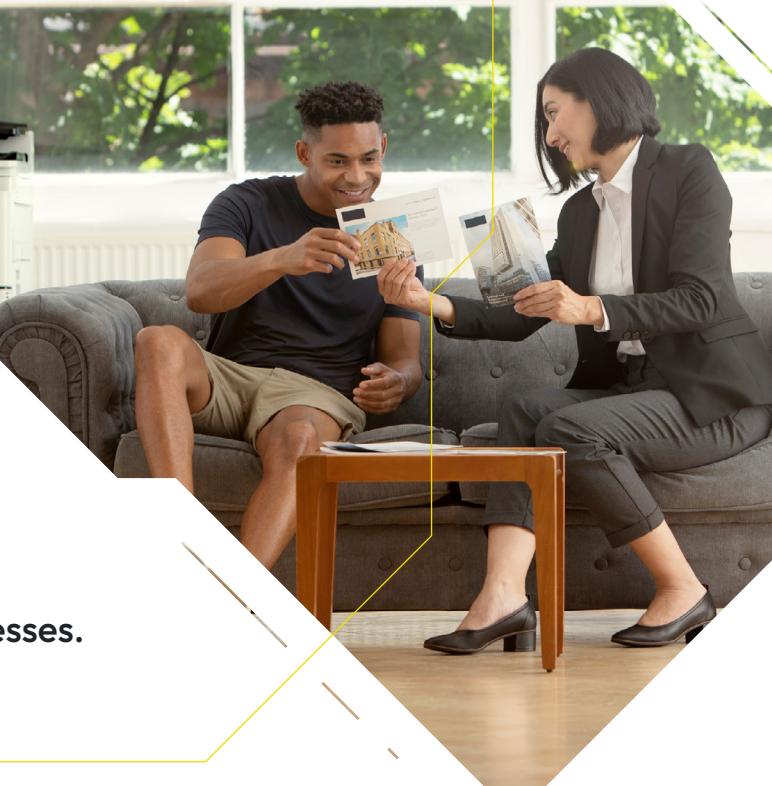

Overview

Our managed print services (MPS) are designed to optimise, monitor, and manage your print environment, especially useful when you lack the time, staff, or expertise to do so effectively.

By leveraging Canon's fast and dependable printing solutions, we deliver best-in-class print quality and productivity while ensuring data security and minimising downtime and service costs.

Benefits of our managed print solutions

Our managed print enhances service quality, improves user experience, optimises processes, and reallocates costs for your printing solutions. You can achieve greater efficiency, security, and sustainability in your document-related processes, helping you meet sustainability goals and making print services an asset for your business.

Wavenet's uniFLOW Online is a secure, public cloud print and scan solution for businesses and educational academies of all sizes, facilitating management of the entire print environment throughout different locations.

It's been developed from the ground up to take advantage of cloud technology benefits and meet the needs of businesses who do not want to invest in, or manage local servers, but still wish to control the printing process and benefit from flexible scan workflows.

Cost efficient

- Reduce print costs
- Print usage calculation
